Most engagements end where the hard part starts.

We're the team that thrives on the hard part.

Strategy, people, process, sales, technology, and structure all pull on each other. We don't fix the part that's shouting loudest and call it done. We work out how the pieces actually connect, help you decide what has to change, and build the structure to carry it through.

What's broken is rarely what's visible. Sales stall for reasons that live outside sales. Technology spend stops paying off somewhere between the licenses and the workflow. The plan and the reality quietly stop matching. Finding that is the work. Running it is the rest of it.

You own the result. You don't rent it.

WHAT WE USUALLY FIND

"Sales are stalled."

When the number won't move, the real constraint can be somewhere else: capacity, pricing, quality, consistency, or a process nobody owns.

"The technology isn't paying off."

The spend is real and the pilots are live. Somewhere between the licenses and the workflow, the value quietly went missing.

"The plan and the reality stopped matching."

Most organizations set a plan once a year, then wait too long to adjust for what is actually happening.

FOUNDING TEAM

Mike Panzarella

CEO | FOUNDER

Mike Panzarella is a C-suite executive and early AI pioneer with over 25 years at the intersection of banking, fintech, and technology. He has directed more than \$2.1 billion in banking, technology, and consumer-retail initiatives, and the platforms and products he's worked on have reached over 40 million users.

He has held C-suite and senior product roles across the industry: Chief Product Officer and Chief Design Officer at Green Dot, leading the product and experience organization behind consumer fintech brands and banking-as-a-service partners including Apple, Walmart, and Uber; Chief Operating Officer, Chief Technology Officer, and Chief Product Officer at Rocket Dollar; and a member of the Square team that launched one of only three new ILC banks approved in fifteen years. Earlier roles span American Express, Citibank, and financial services consulting across North America.

At ArcCentrx, Mike leads strategy, business development, sales, and finance. Today, he leads the firm's financial technology advisory practice directly.

His experience spans banking, insurance, mortgage, payments, retail, and back-office investing, from product design and technical architecture to vendor selection, regulatory delivery, and the build-versus-buy calls that determine whether a system holds at scale, across Fortune 500 enterprises and regulated financial institutions.

FOUNDING TEAM

JoLynn Smith

COO | FOUNDER

JoLynn Smith is a founder and business leader with more than 20 years of experience across enterprise growth, market expansion, P&L leadership, healthcare, medical device, payer/provider strategy, and business transformation.

Her career includes leadership within UnitedHealthcare and Optum, large U.S. health systems, and medical device organizations, as well as work alongside founders, executive teams, and growth-stage and PE-backed companies. She has built and led national commercial organizations, launched new markets, developed institutional partnerships, and supported two companies through market exits.

At ArcCentrx, JoLynn focuses on growth strategy, market expansion, business transformation, organizational structure, and enterprise value. Her work often sits in commercial strategy and the broader business, identifying where growth is being constrained and aligning the strategy, structure, market approach, and resources needed to move the company forward.

Her experience spans health systems, IDNs, GPOs, payer/provider organizations, medical device, pharmaceutical, manufacturing, B2B services, and emerging government and institutional markets.

FOUNDING TEAM

Thomas Young

CMO | FOUNDER

Thomas Young is a marketing and growth executive who has spent his entire career building brands and growth engines across fintech and financial services, spanning customer acquisition, brand, lifecycle, communications, and go-to-market strategy.

He co-founded Rocket Dollar, a self-directed retirement platform for alternative investments, where he helped guide the initial product buildout before building and leading every part of the marketing organization. Under his brand and growth leadership, Rocket Dollar grew its assets under administration to over one billion dollars before the company was acquired in 2024. Earlier, he started his career at AngelSpan and ran a marketing agency serving financial professionals.

At ArcCentrx, he leads marketing, creative, brand, advertising, communications, and demand generation, as well as partnerships, growth strategy, and the delivery team.

His experience spans the full arc of a growth organization, from guiding early product buildout through go-to-market and scale: public relations, growth marketing, lifecycle marketing, brand and creative, customer communications, demand generation, and partnerships across fintech and financial services.

The team you want in the room.

Our founding team spent their careers facing similar challenges from different angles, and teamed up to provide a comprehensive solution to the problems they observed. Chances are that if you have faced a specific challenge, you are not the only one with that problem.

ArcCentrx started with a simple idea: bring together the best people with the most diverse experience. We believe problems get solved by people, and that the right team with the right resources can solve the toughest challenges our clients face.

“

We've had to make the decisions, build the teams, and live with the results.

One team, built for the engagement

We deploy a team shaped around the work rather than around whoever is available.

Advisory and delivery under one roof

Our advisory team builds a plan you can act on. Our delivery team makes sure it doesn't stall there.

Senior people on the work

The people who scoped it are the people who run it. Nothing gets handed down a bench.

We stay through the build

The engagement ends when you can see the change, not when the document is delivered.

Where we work.

Every service stands alone. Scope one, or several, on their own terms. Some engagements are narrow: one system, one team, one decision. Others are a top to bottom rebuild. What doesn't change is how the work gets run.

01

AI Strategy

Determine your AI strategy, or fix it if it's broken.

02

Growth Strategy

Sales infrastructure, market entry, and expansion built on what converts.

03

Technology Infrastructure

Architecture, payments, data, and platform decisions that hold at ten times the volume.

04

Operational Optimization

Process, throughput, and cost, measured before and after.

05

M&A Readiness and Integration

Buy side and sell side, from diligence through the integration that decides the return.

06

Compliance and Governance

Build audit readiness into how you ship instead of scrambling every cycle.

07

Organizational Design

Structure, roles, and accountability that match the business you're actually running.

08

Reporting and Analytics

Numbers your board trusts and your operators can act on.

Can you define your AI strategy, and do you know if it's working?

Most companies know their AI budget to the dollar. Very few can show what came back. The licenses renew, the pilots keep running, and the operating numbers look about the same as they did two years ago. Before the next round of investment gets approved, a few questions are worth getting straight answers to.

QUESTIONS WORTH ANSWERING

- What are we actually spending across licenses, infrastructure, and the people maintaining it?
- Who is using it, how often, and for what? What did we buy twice?
- Which workflows changed, and which ones look the same as they did before?
- If we had to defend the ROI to the board next quarter, could we?

WHAT WE DELIVER

Answers backed by numbers rather than opinion. We fix what is broken, cancel what is not paying for itself, and build an operating model around the parts that work.

WHAT'S INSIDE

AI spend and utilization audit

Use case prioritization

Workflow redesign

AI remediation and consolidation

Model governance and risk controls

Build versus buy evaluation

Team enablement

When the numbers stagnate, more pipeline is rarely the fix.

The constraint usually sits upstream of pipeline. Pricing set years ago and never revisited. A segment that was never really a fit. Deals lost in the handoff between marketing and sales. A product that converts well everywhere except the markets you are spending in. Finding the actual constraint takes an honest read of data you already have.

QUESTIONS WORTH ANSWERING

- Which segment actually converts, retains, and expands? Are we spending there?
- Where in the funnel does the loss happen, and do we have the data to know?
- Is pricing a reflection of value or a reflection of history?
- Which markets are we still funding that have never paid us back?
- What would have to be true for the next market to work?

WHAT WE DELIVER

A growth plan built on what your operating data actually shows, and the sales infrastructure to run it.

WHAT'S INSIDE

Segmentation and ICP

Pricing and packaging

Sales infrastructure and CRM

Funnel and conversion analysis

Demand generation

Market entry and expansion

Partnership and channel strategy

Brand and positioning

Architecture decisions determine whether you scale or die.

Payments, ledgers, KYC, sponsor bank relationships, data architecture.

These get handled as vendor selections, and they are bigger than that. A choice that works fine at fifty thousand customers gets expensive at five hundred thousand and dangerous above a million. Our team has built and run this kind of infrastructure at American Express, Square, Citibank, Apple, and Walmart.

QUESTIONS WORTH ANSWERING

- Does our architecture survive 10x volume, or do we already know where it breaks?
- Can we add a product, a market, or a partner without adding a vendor?
- Where does customer and payment data live, who can reach it, and can we prove that?
- What in our stack is a decision we made once and never revisited?

WHAT WE DELIVER

Help making these calls from people who have lived with the consequences of making them, and who stay through the build.

WHAT'S INSIDE

Architecture and scalability review

Payments and ledger design

KYC and onboarding infrastructure

Sponsor bank and partner strategy

Data architecture and residency

System rationalization and consolidation

Build versus buy and vendor selection

Platform migration delivery

Throughput, quality, and cost, measured before and after.

Cutting cost is easy. Cutting it without damaging the business is the hard part, and it depends on knowing which steps create value and which ones survive only because of a decision nobody has revisited. We measure first and change what the measurement points to.

QUESTIONS WORTH ANSWERING

- What does a unit of our work actually cost, end to end?
- Which steps in this process would a customer pay for if they saw the invoice?
- Where does rework come from, and how often?
- What have we automated on top of a process we should have redesigned?

WHAT WE DELIVER

Process changes with a baseline and a documented result, so the improvement still holds up six months later.

WHAT'S INSIDE

Process mapping and redesign

Cost to serve analysis

Cost takeout

Quality and rework reduction

Automation assessment

Vendor and spend rationalization

Service delivery model design

Most deal value is won or lost after the close.

The first ninety days after a transaction are usually the ones nobody planned for. On the sell side, that means having the house in order before the first diligence request arrives instead of assembling answers against a clock. On the buy side, it means knowing what you are inheriting and having an integration plan that holds up once two real organizations start working together.

QUESTIONS WORTH ANSWERING

- If diligence started next month, what would we be scrambling to produce?
- What in the target's stack, contracts, or compliance posture becomes our problem on day one?
- Who owns integration, and is that a real role or a second job?
- What synergies did we underwrite, and how will we know if they landed?

WHAT WE DELIVER

Readiness work that improves what a buyer sees, and integration work that protects what a buyer paid for.

WHAT'S INSIDE

Sell side readiness and data room preparation

Buy side technology and operations diligence

Integration planning and execution

Systems and platform consolidation

Org and role mapping

Synergy tracking

Carve out and separation support

Being regulated should not mean moving slowly.

In healthcare, financial services, and insurance, compliance is where roadmaps stall. The regulation itself is rarely the problem. What costs you time is finding out about a requirement late, handling every control as a one off, and rebuilding audit evidence by hand each cycle. Teams that have been through it before design for audit up front and keep shipping.

QUESTIONS WORTH ANSWERING

- Is compliance built into how we ship, or is it a scramble before every audit?
- Which deals or partnerships are we losing to a certification we don't have yet?
- Who owns governance for the AI and the data we've put into production?
- If a regulator, acquirer, or partner asked for evidence tomorrow, how long would it take?

WHAT WE DELIVER

Controls, documentation, and governance that let you answer in days instead of quarters, and that make the next audit cost a fraction of the last one.

WHAT'S INSIDE

SOC 2

HIPAA

PCI

ADA and accessibility

State licensing

Model and AI governance

Control design and evidence automation

Audit readiness and remediation

Third party and vendor risk

Policy and documentation

Most org charts describe the company you were, not the one you are building.

Structure sets speed. Roles accumulate, ownership gets fuzzy, and the same decision gets made in three places or in none of them. Companies usually experience this as a performance problem long before anyone names it as a structure problem.

QUESTIONS WORTH ANSWERING

- Who owns this decision, and does everyone agree on that answer?
- Where does work stop moving, and is that a person, a process, or a reporting line?
- Are we structured for the revenue we have or the revenue we're planning for?
- What roles are we about to hire that the structure would make unsuccessful?

WHAT WE DELIVER

A structure your leadership team agrees on, with roles, ownership, and decision rights written down clearly enough to hold under pressure.

WHAT'S INSIDE

Operating model design

Role and accountability mapping

Decision rights and governance

Workforce and capacity planning

Span of control review

Leadership team design

Change and communication planning

Numbers the C-suite, Board, and operators can act on.

Reporting complaints usually get treated as a tooling problem when the real issue is definitions. If two teams calculate the same metric differently, meetings open with an argument about the number instead of a decision about the business. Rebuilding the dashboard does not end that argument.

QUESTIONS WORTH ANSWERING

- Do we agree on what our core metrics mean, in writing?
- How long does the monthly package take, and how much of that is manual?
- Can an operator see the number that their decision affects, without asking someone?
- What does the board ask for that we can't produce quickly?

WHAT WE DELIVER

Agreed metric definitions, reporting that runs without a fire drill every month, and a board package that holds up to questions.

WHAT'S INSIDE

Metric definition and data dictionary

Executive and board reporting

Operational dashboards

Data pipeline and warehouse review

KPI design

Reporting automation

Diligence grade reporting readiness

Assess. Align. Accelerate.

Different services, same discipline. Whatever the work is, the way we run it doesn't change. We assess what's going on before proposing an answer, align the teams before building, then accelerate delivery inside clear boundaries. In that order, every time.

01

Assess

Define the obstacle and propose a solution.

We frame the problem and understand the outcome you're after before proposing a path forward. We define outcomes to ensure success, then focus on the details that most teams move past. That's usually where the real constraint is.

YOU GET

A problem everyone agrees on

What success means to each decision maker

The root cause, and a clear scope

02

Align

Agree on a path forward, and who's responsible.

We drive consensus on priorities, constraints, and how success gets measured. Benchmarks and past patterns inform the call; they never make it for us. We weigh the options the way people who have run a business would, and settle on a plan built for your situation, not a template.

YOU GET

Objectives and scope everyone agrees on

A plan built for your situation

A workplan with named owners and real measures

03

Accelerate

Execute fast, without cutting corners.

The work runs on a plan, so it stays urgent and in scope instead of sprawling. We move from decision to delivery with clear ownership and honest tradeoffs, and we hold ourselves to the standard we'd hold our own business to.

YOU GET

The work delivered, not handed off

Recommendations you can act on now

Less time between the decision and the result

Four operating principles.

01

Success, defined up front

Before any work starts, everyone involved will have a clear definition of what success looks like.

02

Experience, not box checking

We focus on the details that most teams move past. That's usually where the real constraint is.

03

Patterns, not templates

We bring what we've learned across dozens of businesses, then apply it to yours specifically. No template survives contact with a real company, and we don't pretend otherwise.

04

On time, in scope

Every project is defined with a clear outcome, so we keep moving, and the timeline holds.

WHAT IT PRODUCES

Outcomes you can point to.

Clarity

A shared definition of the problem and the outcome.

Alignment

Leadership pulling in the same direction.

Control

Less scope creep, rework, schedule risk.

Velocity

Less time between the decision and the result.

Clarity creates alignment. Ownership sharpens judgment. Alignment creates velocity.

What it looks like in practice.

Client names withheld. The situations are real.

CONSUMER FINTECH · MOBILE-FIRST STRATEGY

Made the mobile app the front door and lifted customer value 330%

SITUATION

A multi-brand card program was carrying too many routine interactions over costly phone and support channels.

WHAT WE DID

Made the mobile app the front door to the product family, bundling payments, savings, direct deposit, and rewards into one experience customers could self-serve.

RESULT

Mobile logins grew 73% to 229.7M, and the most engaged customers were worth 330% more over their lifetime than those who never logged in.

POST-ACUTE HEALTHCARE · GROWTH

Grew a post-acute healthcare division 250%

SITUATION

A healthcare division needed accelerated growth and stronger market penetration.

WHAT WE DID

Worked across business development, market strategy, relationships, sales execution, and operational alignment, rather than treating growth as a standalone sales problem.

RESULT

250% growth in the division.

FRACTIONAL LEADERSHIP · ENTERPRISE SALES

Closed a \$30M enterprise opportunity as a fractional executive

SITUATION

A company needed senior commercial leadership without building an entirely new permanent executive structure.

WHAT WE DID

Stepped in as a fractional CSO, worked the enterprise opportunity, and navigated the commercial process to close.

RESULT

\$30M enterprise deal closed.

Enterprise and mid-market companies,
at the point where the next stage
requires something the current
structure can't carry.

SITUATIONS

Transformation and
replatforming

Scale and the constraints
that arrive with it

Transactions, buy side and
sell side

Technology decisions with a
long tail

Operating and margin
pressure

SECTORS

Financial services and

Healthcare, payer and
provider

Medical device and
pharmaceutical

Retail and consumer

B2B services and
manufacturing

COMPANY PROFILE

Real revenue we can actually
move

PE backed and growth stage

Regulated environments

Post transaction integration

Fortune 500 divisions and
business units

What happens when you reach out.

No proposal process and no strategy deck that sits in a drawer. Here is how an engagement actually starts.

1

A real conversation

Tell us what's stuck. We'll tell you what we'd look at first, no proposal process required.

2

A focused scope

We define the problem, the outcome, and how we'll measure it, together with your leadership.

3

We get to work

Our team embeds alongside yours and runs the plan until you can see the change.

Some engagements are a single decision that has been sitting too long. Others run for quarters and touch most of the company. Either way the first step is the same, and it isn't a pitch.

Bring us the thing that isn't working. We'll tell you honestly whether it's a problem we should be in the room for, and what we would look at first.

GET IN TOUCH

Start with a real conversation, not a proposal process.
